## About me

AI Integration Specialist who builds agentic AI systems end-to-end, independently. At Accenture, I took Tombot – a conversational AI agent embedded in Oracle Transportation Management – from a rudimentary, LLM-free assistant to a full agentic system with LLM reasoning, RAG, and document recognition, in under a year, as the sole developer with no senior support. I work across the Oracle AI ecosystem and the modern LLM stack: agentic architecture, RAG pipelines, and enterprise API integration.

## Skills

LLM Integration · Agentic Architecture · RAG Pipelines · Prompt Engineering & Guardrails · LLMops (OCI + OpenAI) · Microsoft Semantic Kernel · Oracle Digital Assistant · OCI Generative AI · REST APIs · C# / .NET · Node.js · JavaScript · Docker

## Experience

### Functional-Technical Consultant | AI Integration Engineer

Accenture (Flo Group) | 2024 – Present

- Independently architected and built Tombot, a transactional conversational AI agent embedded in Oracle Transportation Management (OTM) – sole developer across architecture, code, and documentation, with no senior supervision. Took it from an ODA-only, LLM-free assistant to a full agentic system with LLM reasoning (OpenAI / OCI Generative AI), RAG, and document recognition in under a year.
- Designed a schema-driven, declarative API catalog (13 OTM objects, 37 operations) on a modular deterministic pipeline (router → planner → entity resolver → executor → parser → presenter), with a stateless architecture for restart idempotency and horizontal scaling, RAG with anti-hallucination guardrails, and a hybrid OCI/OpenAI LLM client.
- Presented live demos at multiple OTM industry conferences and scoped a working demo for a prospective enterprise client evaluating recurring OTM planning failures.

### Freelance Web Developer – Self-employed

Independent / Direct Clients | Late 2022 – March 2024

- Designed, built, and deployed e-commerce sites on WordPress for small business clients, independently managing development, hosting, and domain/DNS configuration.

## Projects

### EnMoto – Founder & Sole Developer · [enmoto.com.ar](https://enmoto.com.ar)

- Designed, built, and deployed a production mobile platform (social network + marketplace + anti-theft alerts) with an integrated AI recommendation agent (Semantic Kernel + OpenAI). Live in production on free-tier infrastructure; preparing for Google Play Store launch. Stack: C# / .NET 10, PostgreSQL/PostGIS, SignalR, Docker on OCI. Built and shipped entirely solo.

## Education

Technical Degree – Video Game Design & Development (in progress) - UPSO  
Web Developer – UTN FRBA

### Certifications

- Oracle Fusion AI Agent Studio Certified Foundations Associate
- Oracle Fusion Transportation and Global Trade Management Cloud 2024 Implementation Professional
- OCI AI Foundations Associate (in preparation – July 2026)
- EF SET English Certificate – C2 Proficient
- Oracle Cloud Infrastructure 2026 Enterprise AI Professional
